

Bubble Snake

What you need

- An old plastic water bottle
- A sock
- Dish soap and water
- Scissors

What to do

- Cut the bottom of the water bottle off with the scissors. This might be a little tricky so make sure to ask a grown up for help. It may also be sharp so make sure to watch your fingers
- Take your sock, and place it over the cut end. If it is a bit loose then you can use an elastic band or some string to hold it in place.
- Then mix about 1/2 a cup of water with a good squeeze of some dish soap and give it a good mix.
- Dip the end with the sock in the soap mix, and then blow through the top of the water bottle, making the snake!!
